## Get powerful GIS automation & ability to:

 Input, edit, label, inspect and report GIS data to entities via simple tools, including querying for parcels or entities that meet conditions;

- Obtain topographic and planimetric features from county databases;
- Perform preliminary engineering studies, hydrologic studies and planning analysis;
- Assign names to layers and then report sub-areas within a perimeter using closed polylines on those layers;
- Create geo-referenced image by user-specified coordinates for two image points;
- Import images and terrain from Google Earth;
- Import/Export ESRI shape data and coordinates and polylines;
- Create world file by image position in drawing;
- Import SHP file with support for pointm, polylinem and ploygonm shape files, with option to reassign entity elevations from the elevations in a 3D SHP file.
- Image Set Manager to handle large image areas and automatically adjust the resolution based on your zoom level.
- Drape Images on 3D Surfaces and view in 3D
- Attach images to entities and then use the Image Inspector to view the images
